Introduction

This report applies passive footprinting to www.hp.com using only Google search operators such as site:, filetype:, intitle: and inurl:. It records the PDF, PPT and DOC files, login pages, admin pages, contact pages and privacy policies that are publicly visible, without logging in to or probing any system. It then analyses how an attacker could use this information for social engineering attacks such as phishing, vishing and pretexting, and suggests countermeasures.

Footprinting tools

Footprinting gathers a target's domains, subdomains, IP ranges, documents, employee details and technologies. It is **passive** when it uses only public sources such as search engines and **active** when it interacts with the target's systems. This assessment is passive. Typical tools include Google dorking, WHOIS, nslookup and dig, Shodan, Maltego and the Wayback Machine.

Methodology

Seven Google searches were run in a normal browser, one per required category, each restricted to hp.com with the site: operator. The assignment sheet prints "filetype" as "Diletype", which is a typographical error; the correct operator filetype: was used. For each search, the visible result links were recorded one by one and a screenshot was taken showing the query and the results.

No.	Category	Google query	Operator used
1	PDF files	site:hp.com filetype:pdf	filetype
2	PPT files	site:hp.com filetype:ppt OR filetype:pptx	filetype, OR
3	DOC files	site:hp.com filetype:doc OR filetype:docx	filetype, OR
4	Login pages	site:hp.com intitle:login	intitle
5	Admin pages	site:hp.com inurl:admin	inurl
6	Contact page	site:hp.com "contact"	exact phrase
7	Privacy policy	site:hp.com "privacy policy"	exact phrase

Operator meanings: site: limits results to one domain, filetype: limits them to a document type, intitle: requires a word in the page title, inurl: requires a word in the URL, and quotation marks match an exact phrase.

Findings

Counts are the number of links recorded from the Google results for each search.

Particular	Count	List links one by one
PDF files	5	1. kaas.hpcloud.hp.com/pdf-public/pdf_12904670_en 2. www.hp.com/ctg/Manual 3. h20195.www2.hp.com/v2/GetDocument (HP EliteBook 6 G2i) 4. h20195.www2.hp.com/v2/GetDocument (HP ProBook 4 G2i) 5. kaas.hpcloud.hp.com/pdf-public/pdf_3941897_en-US
PPT files	0	No .ppt or .pptx files returned. Closest hp.com result: https://www.hp.com/us-en/newsroom/press-kits.html (press kits page, not a presentation file).
DOC files	3	1 https://support.hp.com/si-en/document/c035290document 2https://in.search.yahoo.com/search?fr=mcafee&type=E211IN826G0&p=site%3Ahp.com+filetype%3Adoc 3 https://h30434.www3.hp.com/t5/Mobile-Printing-Cloud-Printing/HP-APP-docx-files/m-p/6511264

Search evidence

Each figure shows the Google query and the results returned for it.

Figure 1: `site:hp.com filetype:pdf`

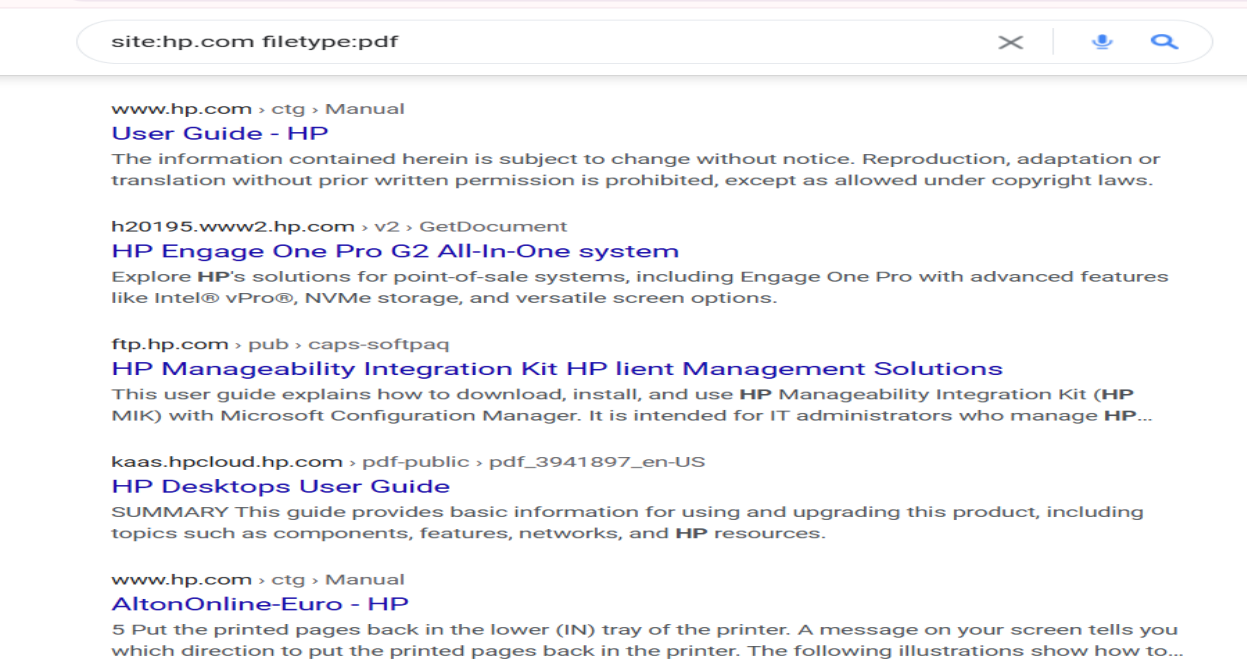

Figure 2: `site:hp.com filetype:ppt OR filetype:pptx`

No .ppt or .pptx files returned. Closest hp.com result: https://www.hp.com/us-en/newsroom/press-kits.html (press kits page, not a presentation file).

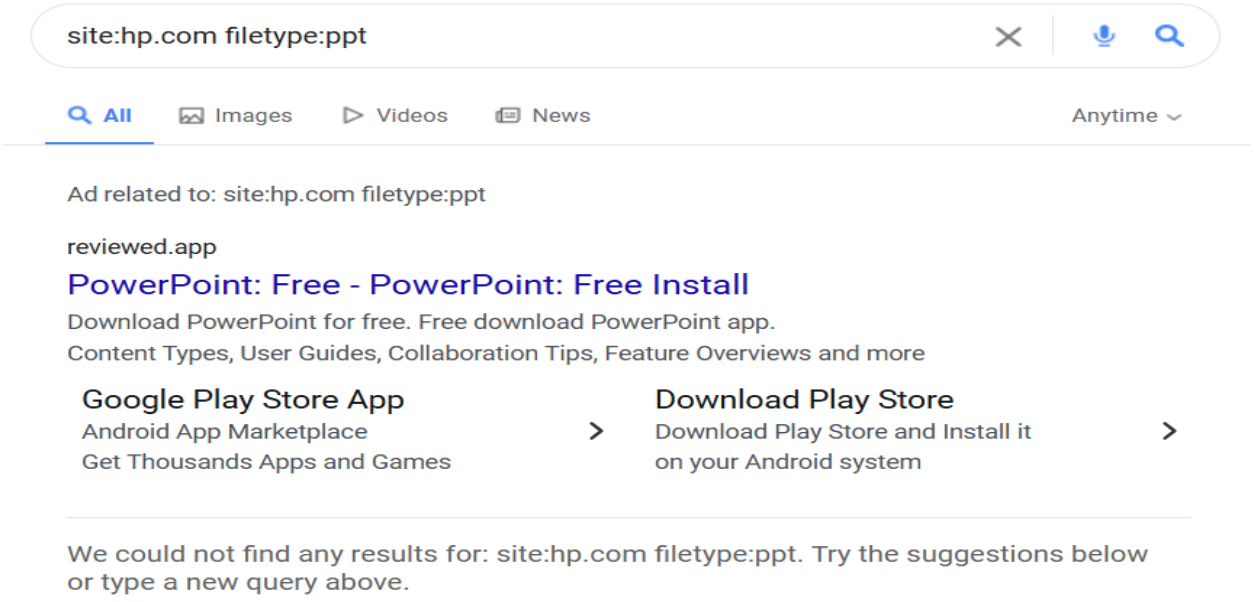

Figure 3: `site:hp.com filetype:doc OR filetype:docx`

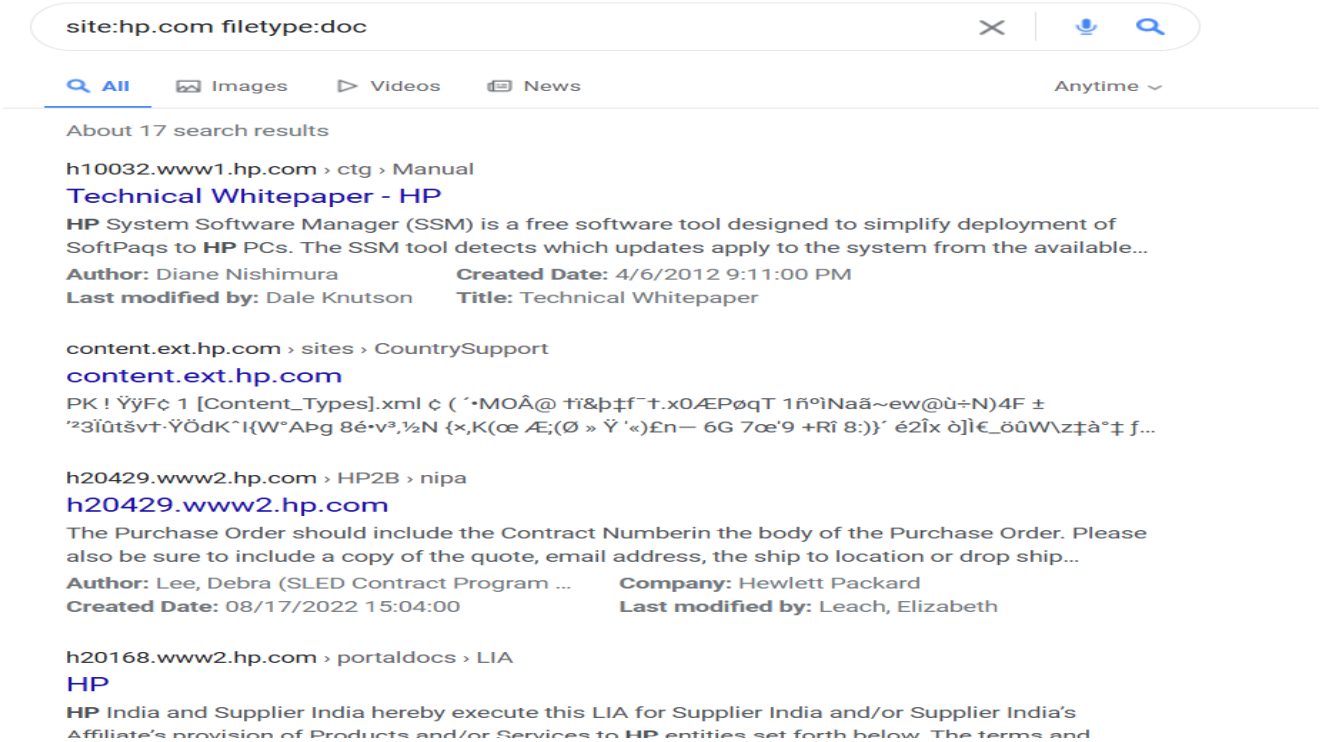

Figure 4: `site:hp.com intitle:login`

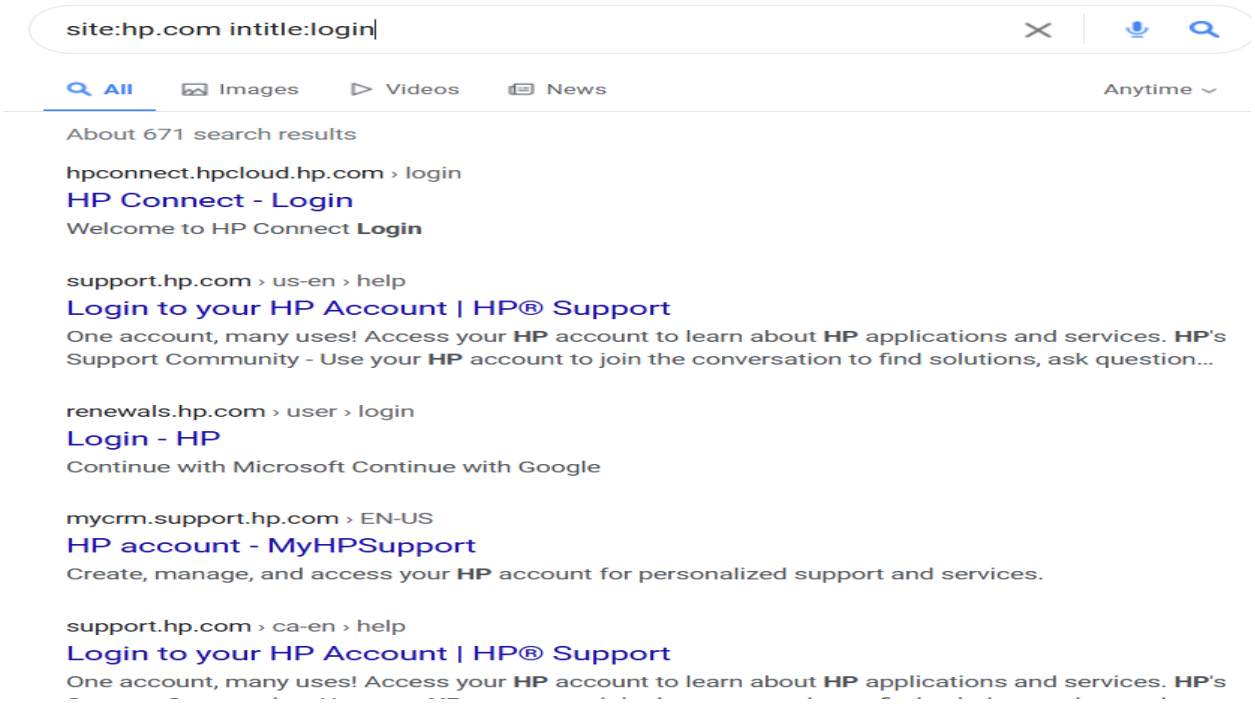

Figure 5: `site:hp.com inurl:admin`

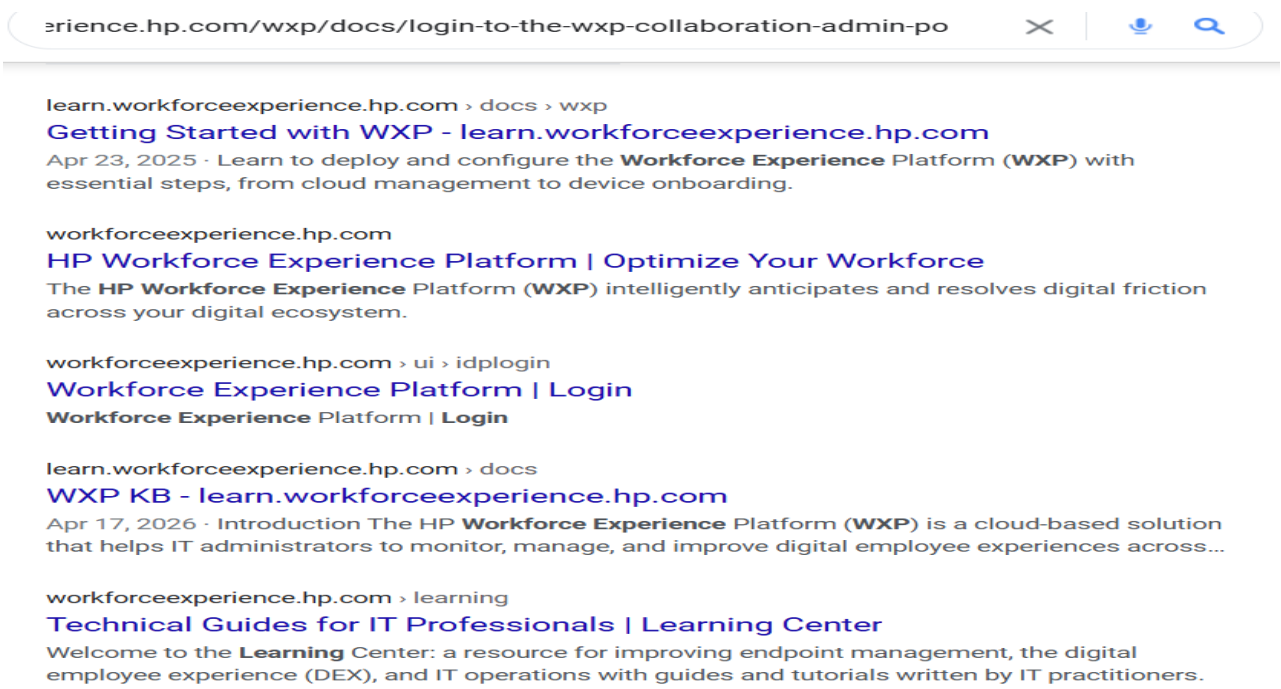

Figure 6: `site:hp.com "contact"`

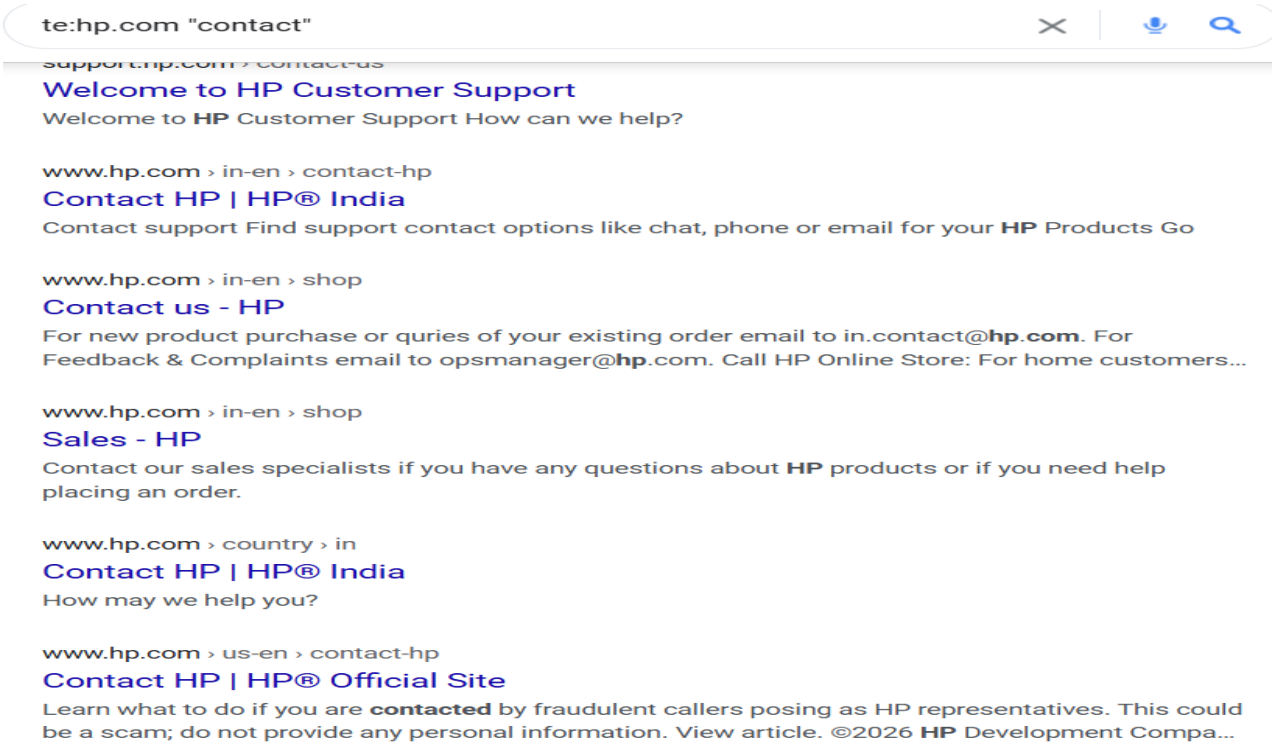

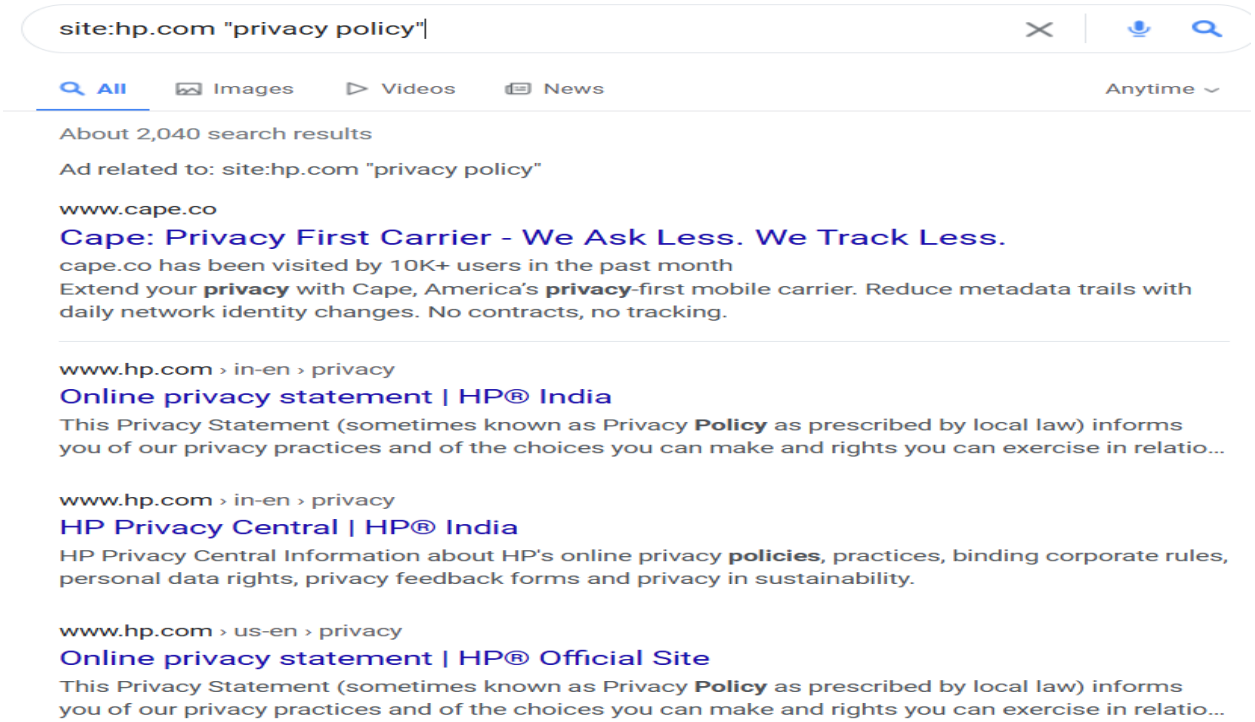

Figure 7: `site:hp.com "privacy policy"`

Security and social engineering analysis

Finding	How an attacker could use it	Likely attack	What I observed for hp.com
PDF, PPT and DOC files	Metadata can reveal author names, usernames, software versions and internal project or department names. Document text shows tone and jargon to copy.	Spear phishing, pretexting	PDFs came from several subdomains and include firmware whitepapers and user guides. No PPT or DOC files were returned.
Login pages	Shows which portals exist (support, partner, employee). An attacker can clone a page and send a link to it.	Credential phishing	A login-process page on lkc.hp.com and a regional login guide PDF on jp.ext.hp.com show the HP ID sign-in flow, which could be copied.
Admin pages	Exposed admin paths hint at the technology in use and are a target for guessing or fake "admin alert" emails.	Phishing, brute force	learn.workforceexperience.hp.com documents an admin portal and how to log in to it, and a community post references the admin.hpsmart.com portal.
Contact page	Departments, phone numbers and email formats let an attacker call or write as a colleague, customer or vendor.	Vishing, impersonation	Regional contact pages for sales and large format experts show how customers reach HP staff.
Privacy policy	Names data practices and often third-party processors, which can be impersonated in a believable notice.	Vendor impersonation	Nine privacy statements, many as dated regional PDFs from 2015 to 2026, describe data practices that an attacker could quote in a fake notice.

Conclusion

Passive footprinting with Google operators shows how much of an organisation's structure and working language is visible without touching its systems. For www.hp.com, the findings above

show 5 PDF links on the first results page, no PowerPoint or Word files, 2 login-related pages, 3 admin-related pages, 3 contact pages and 9 privacy statements. The most useful items to an attacker are the technical PDFs and the admin portal documentation, because they name systems and procedures. Individually these pages are public by design, but together they give a social engineer accurate names, formats and portals to imitate. Training, document hygiene, strong authentication and verification habits are the most effective defences.
